

Table of Contents

Preface	xi
Chapter 1. Review of Fundamental Principles	1
1.1 Dimensions and Units	1
1.2 Elements of Vector Analysis	2
1.3 Statics and Dynamics	5
1.4 Newton's Laws of Motion	6
1.5 D'Alembert's Principle	6
1.6 Virtual Work	7
Problems	10
Chapter 2. Kinematics and Dynamics of a Particle	13
2.1 Kinematics of a Particle	13
2.2 Particle Kinetics	16
2.3 Angular Momentum (Moment of Momentum) of a Particle	19
2.4 Work and Kinetic Energy	21
2.5 Conservative Forces	21
Problems	23
Chapter 3. Dynamics of a System of Particles	27
3.1 Conversion of Coordinates	27
3.2 Collision of Particles in Midair	31
3.3 General Motion of a System of Particles	37
3.4 Gravitational Force and Potential Energy	40
3.5 Collision of Two Spheres on a Plane	44
Problems	50
Chapter 4. Lagrange's Equations and the Variational Principle	53
4.1 Generalized Coordinates, Velocities, and Forces	53
4.2 Lagrangian Equations	55
4.3 Hamilton's Principle	66
4.4 Lagrangian Equations with Constraints	70
4.5 Calculus of Variations	76
Problems	83
Chapter 5. Rockets and Space Vehicles	85
5.1 Single-Stage Rockets	85
5.2 Multistage Rockets	90

5.3	Motion of a Particle in Central Force Field	92
5.4	Space Vehicle with Electrical Propulsion (equations solved by small perturbation method)	103
5.5	Interplanetary Trajectories	107
	Problems	112
Chapter 6. Matrices, Tensors, Dyadics, and Rotation Operators		115
6.1	Linear Transformation Matrices	115
6.2	Application of Linear Transformation to Rotation Matrix	119
6.3	Cartesian Tensors and Dyadics	121
6.4	Tensor of Inertia	126
6.5	Principal Stresses and Axes in a Three-Dimensional Solid	129
6.6	Viscous Stress in Newtonian Fluid	133
6.7	Rotation Operators	136
	Problems	147
Chapter 7. Dynamics of a Rigid Body		151
7.1	Displacements of a Rigid Body	152
7.2	Relationship Between Derivatives of a Vector for Different Reference Frames	152
7.3	Euler's Angular Velocity and Equations of Motion	156
7.4	Gyroscopic Motion	162
7.5	Motion of a Heavy Symmetrical Top	168
7.6	Torque on a Satellite in Circular Orbit	172
	Problems	177
Chapter 8. Fundamentals of Small Oscillations		181
8.1	Fourier Series and Fourier Integral	182
8.2	Fourier and Laplace Transforms	195
8.3	Properties of Laplace Transforms	197
8.4	Forced Harmonic Vibration Systems with Single Degree of Freedom	203
8.5	Transient Vibration	214
8.6	Response Spectrum	221
8.7	Applications of Fourier Transforms	224
	Problems	228
Chapter 9. Vibration of Systems with Multiple Degrees of Freedom		233
9.1	Vibration Systems with Two Degrees of Freedom	234
9.2	Matrix Formulation for Systems with Multiple Degrees of Freedom	244
9.3	Lumped Parameter Systems with Transfer Matrices	255
9.4	Vibrations of Continuous Systems	266
9.5	Nonlinear Vibrations	289

9.6	Stability of Vibrating Systems	294
	Problems	299
Chapter 10.	Special Relativity Theory	305
10.1	Lorentz Transformation	306
10.2	Brehme Diagram	310
10.3	Immediate Consequences in Kinematics and Dynamics	314
	Problems	317
Appendix A:	Runge–Kutta Method	319
Appendix B:	Stoke’s Theorem	321
Appendix C:	Planetary Data	325
Appendix D:	Determinants and Matrices	327
Appendix E:	Method of Partial Fractions	331
Appendix F:	Tables of Fourier and Laplace Transforms	335
Appendix G:	Contour Integration and Inverse Laplace Transform . . .	339
Appendix H:	Bessel Functions	349
Appendix I:	Instructions for Computer Programs	363
Appendix J:	Further Reading	365
Subject Index	367
